Idan Siman-Tov recently made Aliyah from the US (and is fluent in Hebrew) and is seeking research position in data science or bioinformatics.

If you are interested, please contact him directly: idansim6@gmail.com / 052-447-4430

In his words:

Hello, my name is Idan Siman-Tov, and I recently completed my Masters in Bioinformatics under the College of Computer Science at San Jose State. I recently made an Aliyah from the United States and am in the process of getting to know the Bioinformatics community in Israel. I have work experience in Immunology at Stanford University, Neurogenetics at San Jose State University, and served as a Data Analyst during my Masters program. My expertise spans various Bioinformatics and Data Science techniques, including AI, DNA Sequencing, Data Visualization, Statistical Models, Hidden Markov Models, Microarrays, and Big Data analytics. I am currently seeking a dynamic work environment that allows me to explore the underlying stories within the data I work with. An environment that fosters creativity, encourages continuous learning, and embraces cutting-edge technologies would be an ideal fit for my career aspirations. I am eager to contribute my skills to projects that have a real-world impact, pushing the boundaries of scientific knowledge and innovation.
